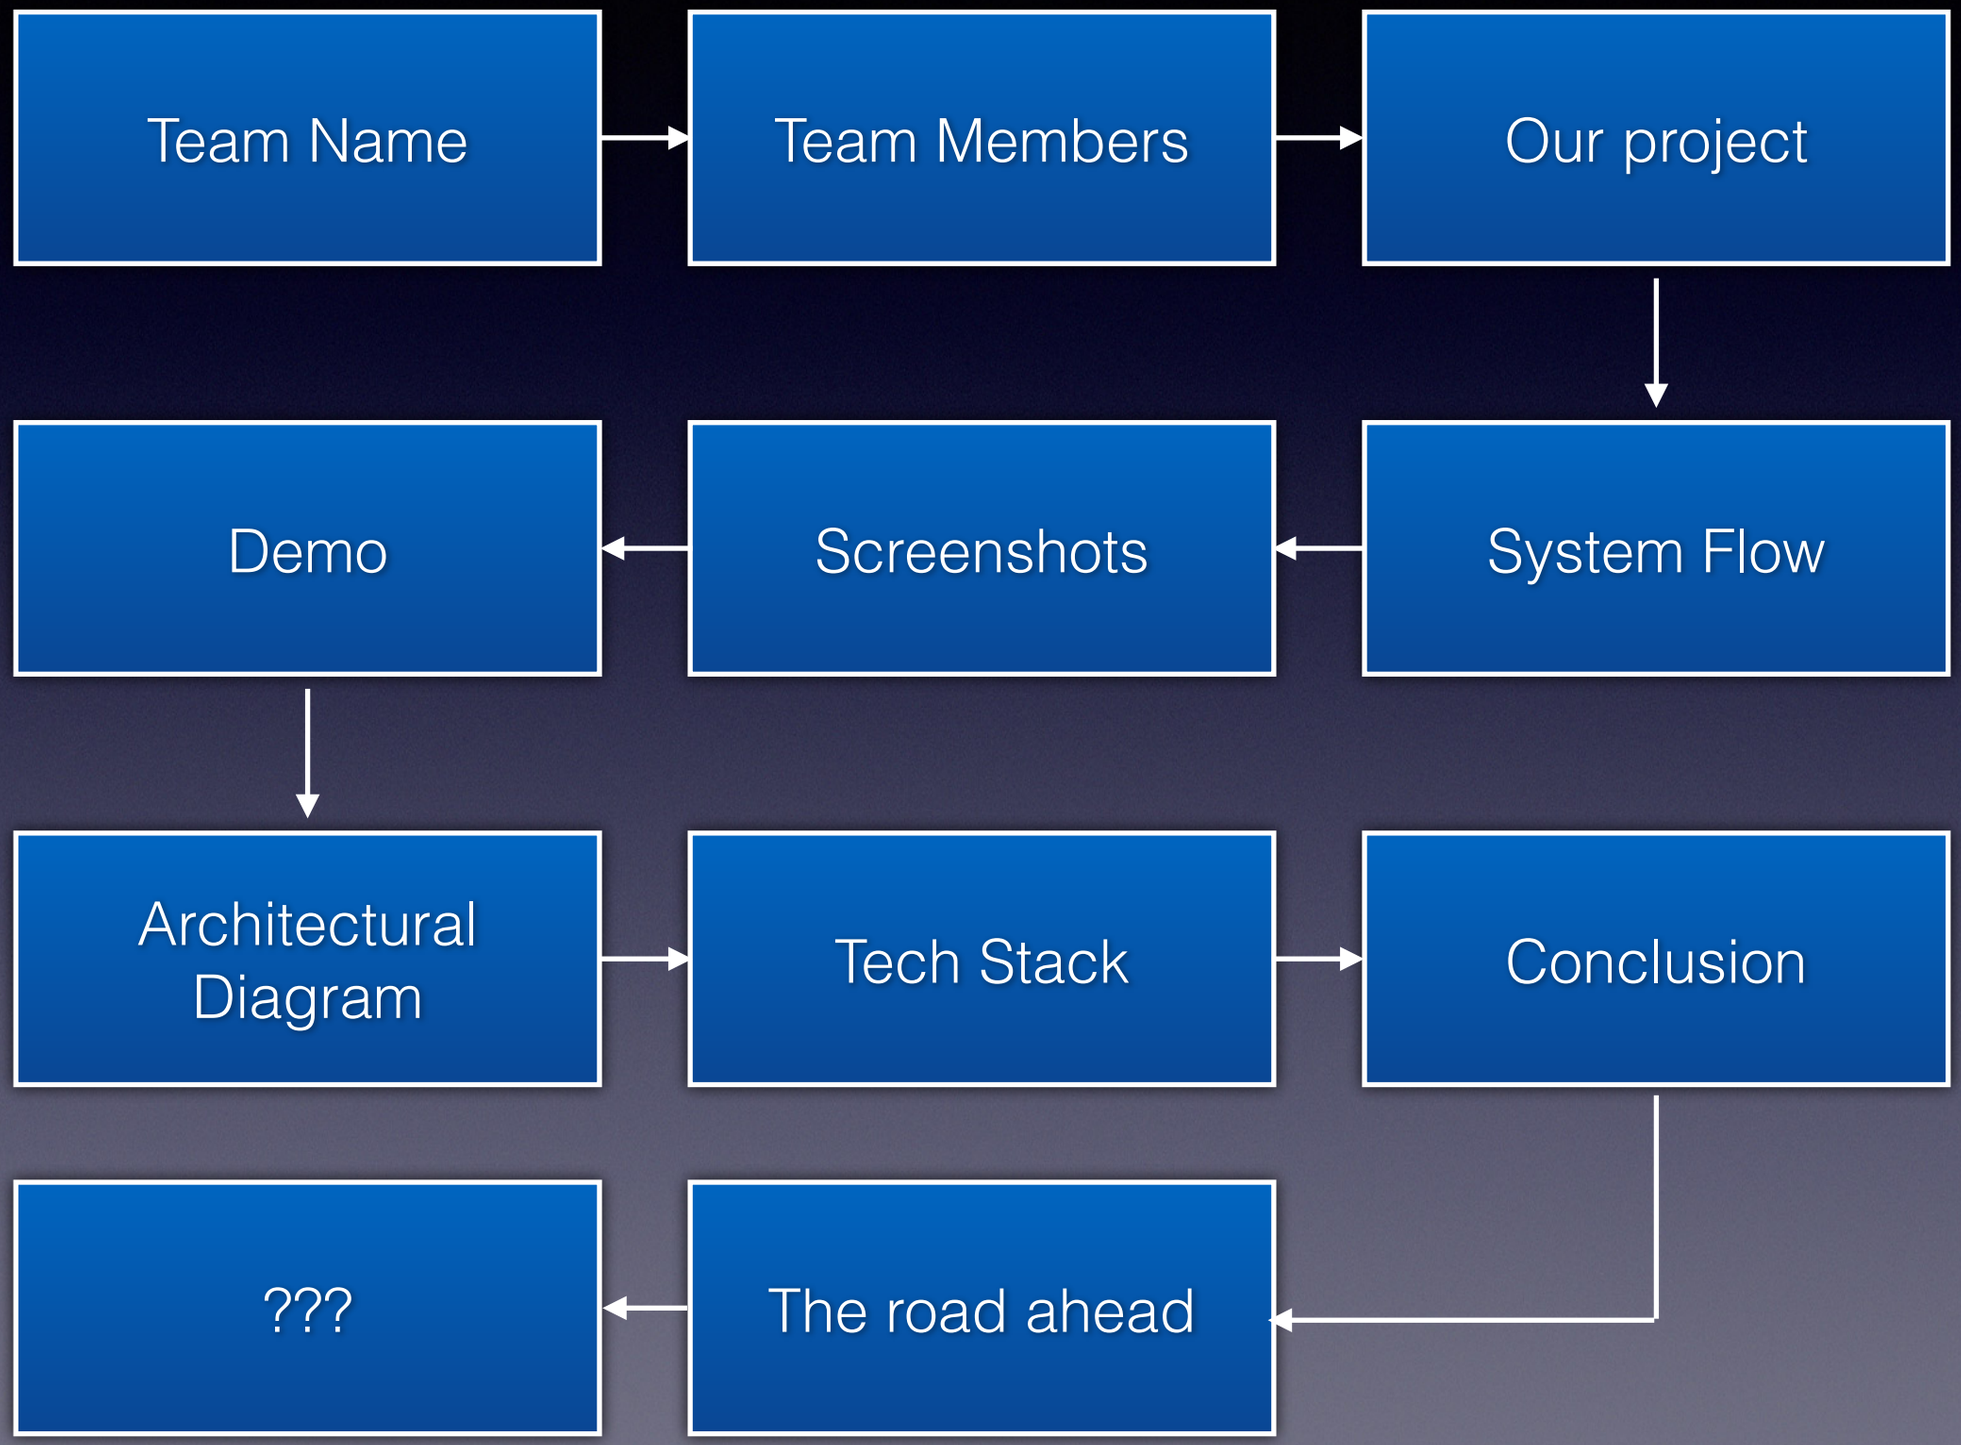
Some Ideas for Presentation

(This is just a guide, but you can do it anyway you like)

The flow



Prepared by Wei-Meng Lee for HSBC 2026

Our Team Name

Whatever is useful to the audience
E.g. your division you belong to, etc

Our Team Members

- List the names of your team members
- Put photos if you want
- Briefly talk about the distribution of work

Our Project

- This is where you describe your project
  - What it does
  - What it attempts to solve
  - Use diagrams to bring your points across

Diagram(s) to show the flow of your system

You can also put some screenshots here

Demo

Architectural diagram of your system

Tech Stack

- Describe the tech stack you used in your system
  - E.g. Docker, OpenShift, Databases, Angular, Vue, SpringBoot, .NET, Python, etc

Conclusion

- What have we learned?
  - Be candid and feel free to share negative points
  - But overall you should be positive
- What could have been done if given more time
- Future enhancements
- How could this be useful to your work at your company

The Road Ahead

List down the long term visions of your project

Some Tips and Tricks for Presentation

- Limit your bullet points to at most three (if you used bullets at all)

Your slides are to guide you on what to say, not for your audience to fixate on

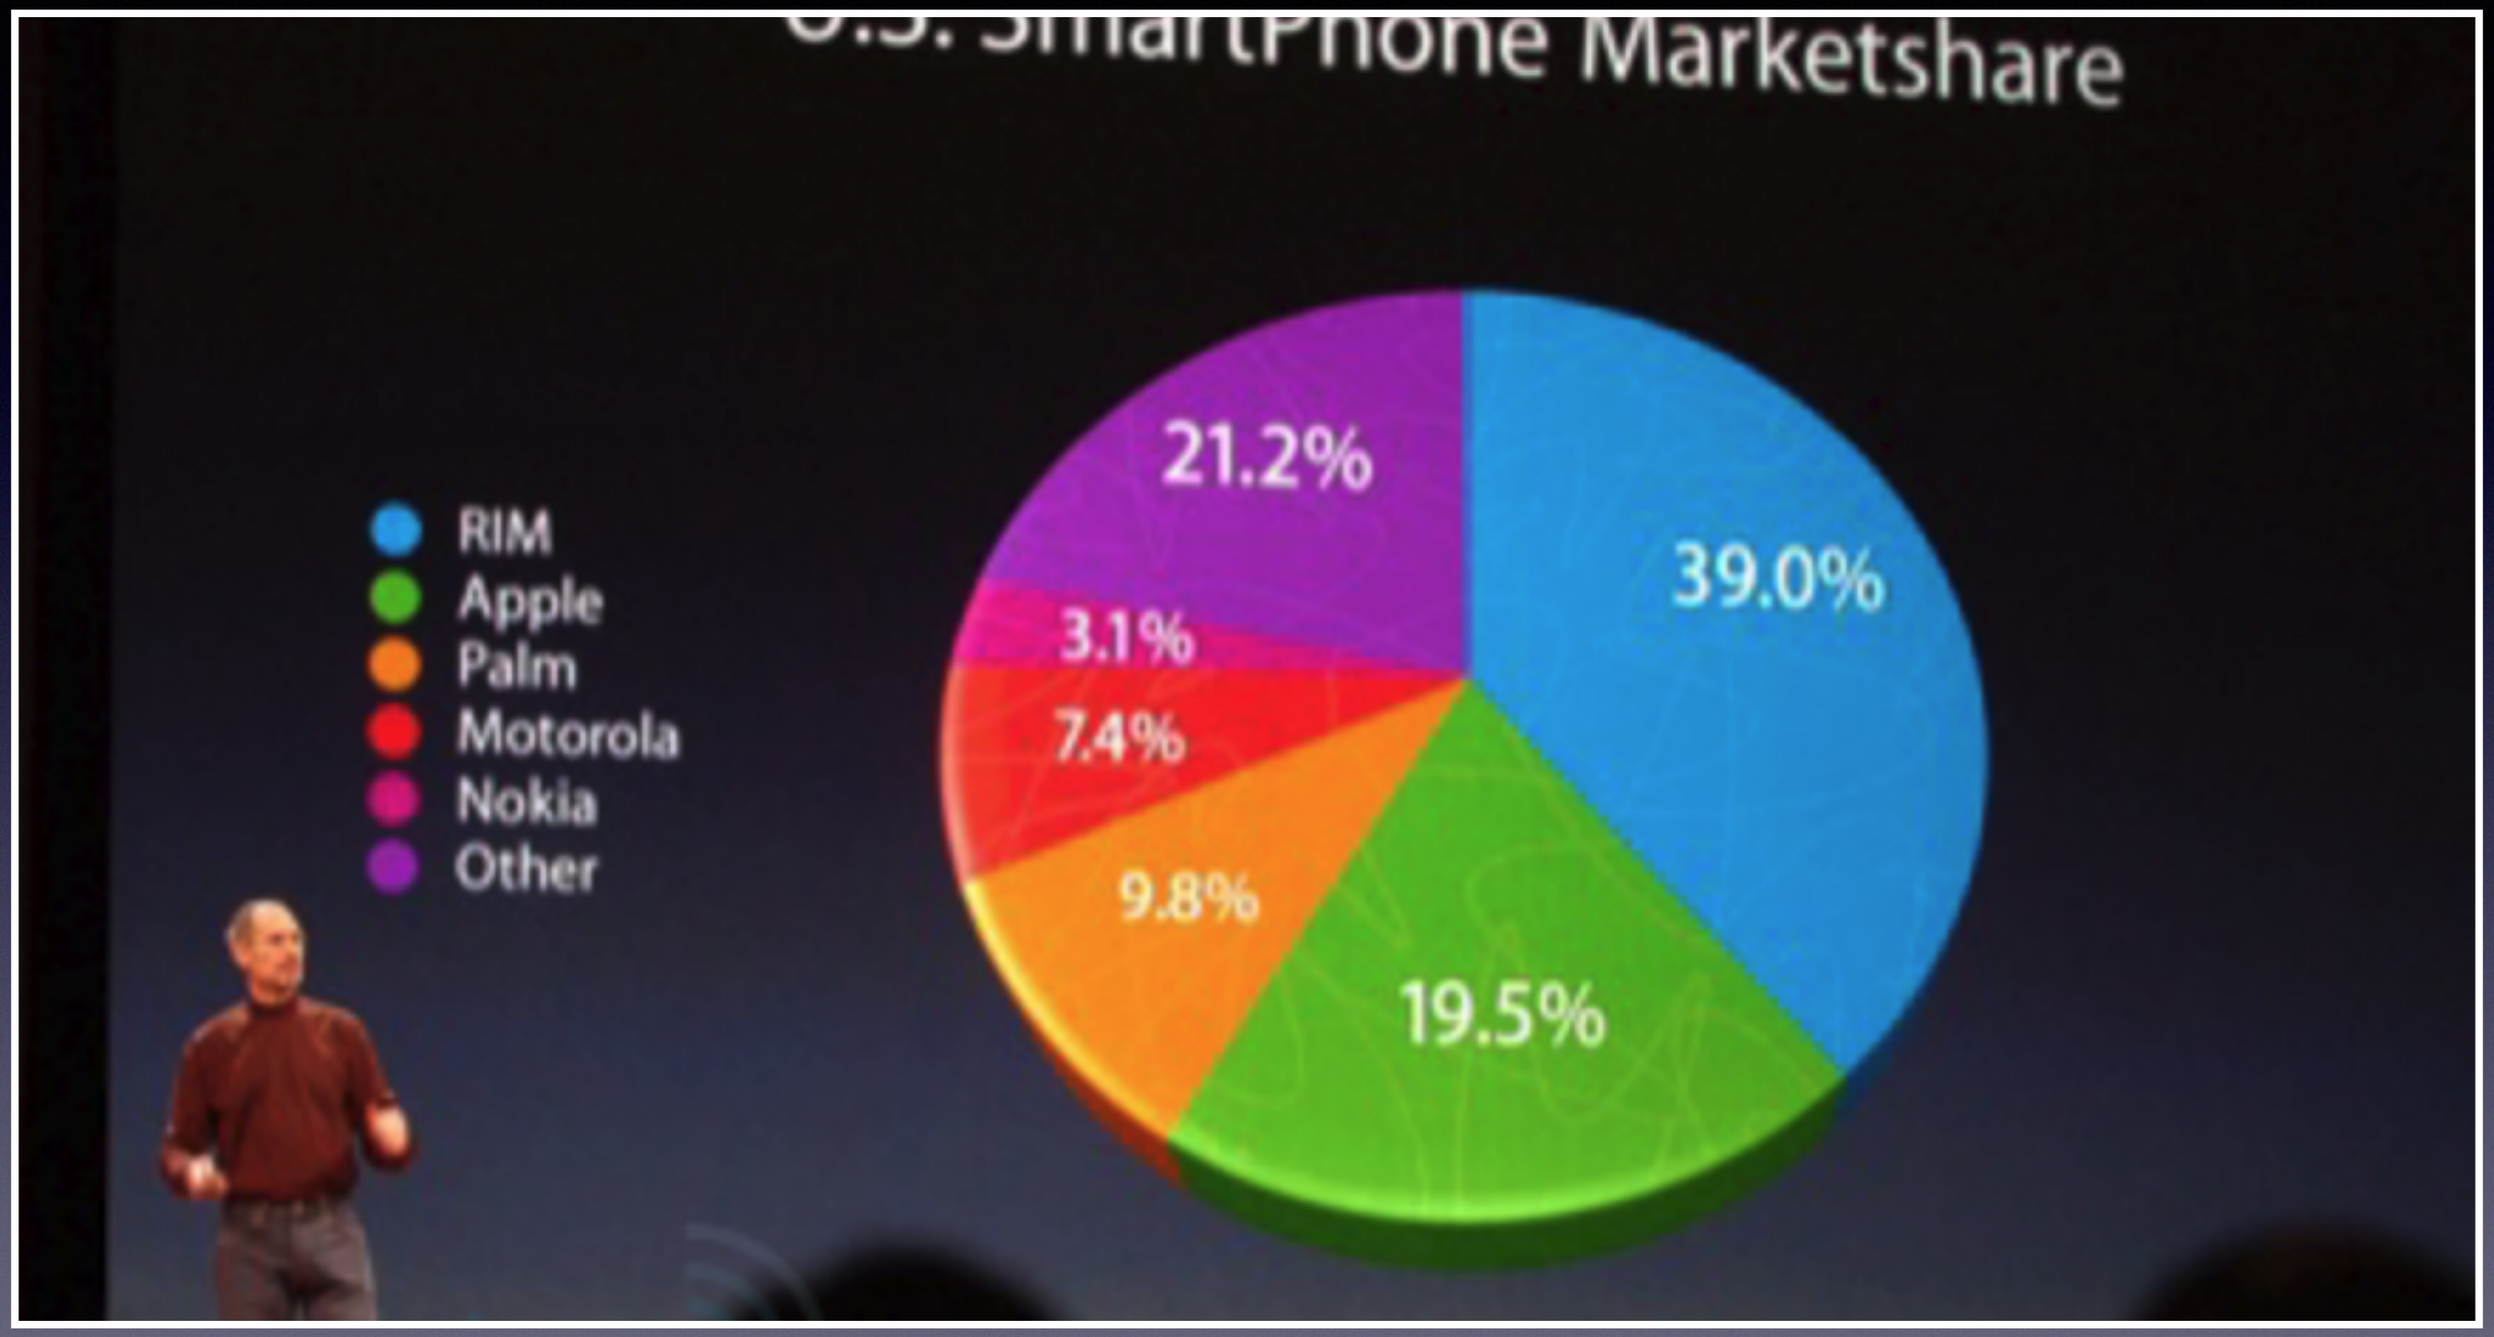
It would be better to have 10 slides each containing an important point than 1 single slide containing the 10 important points

Use realistic test data

Don't use data like:

Test 1, Test 2, User 1, User 2, etc

A picture is
worth a
thousand
words



U.S. SmartPhone Marketshare
RIM
Apple
Palm
Motorola
Nokia
Other
39.0%
19.5%
9.8%
7.4%
3.1%
21.2%

Moto Q
BlackBerry
Palm Treo
Nokia E62

Read your audience

Change your rhythm if the audience starts snoozing...

DO
WHAT
YOU
LOVE
LOVE
WHAT
YOU
DO
